01 Demo

UI Features

The player can be initiated from an in-app call to action and opens as a full page. Below is a description of the primary user interface features:

A Station List

Brings user to the station list where a new station can be selected. See more on page X

B Station Carousel

The user can also swipe left/right through the stations in the station carousel (the currently playing song / controls stay fixed)

C Initiate Station

For a station that is not currently playing, the station can be initiated by clicking here

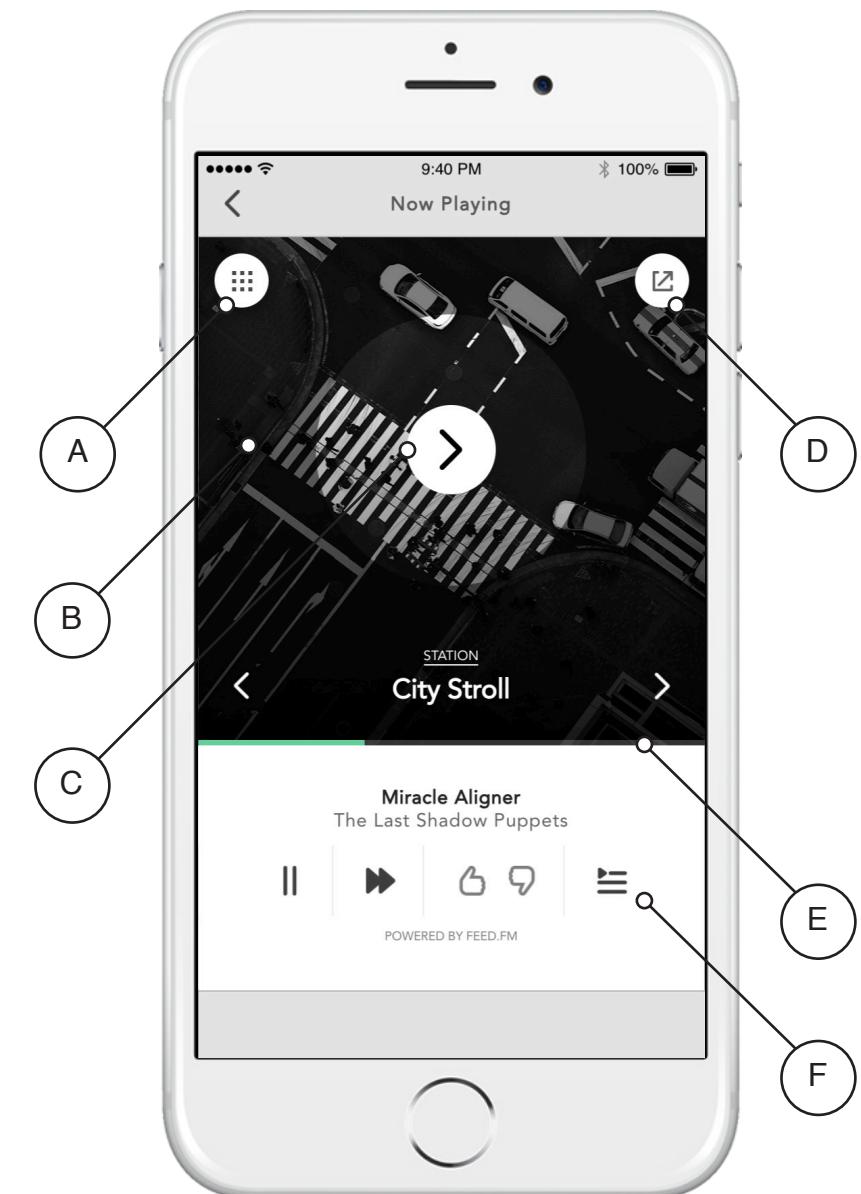

D Sharing

The user can share what they are listening to via native sharing functionality

E Song Playback Bar

F Playback Controls

Controls include Pause/Play, Skip, Like, Dislike, and Song History

01 Demo

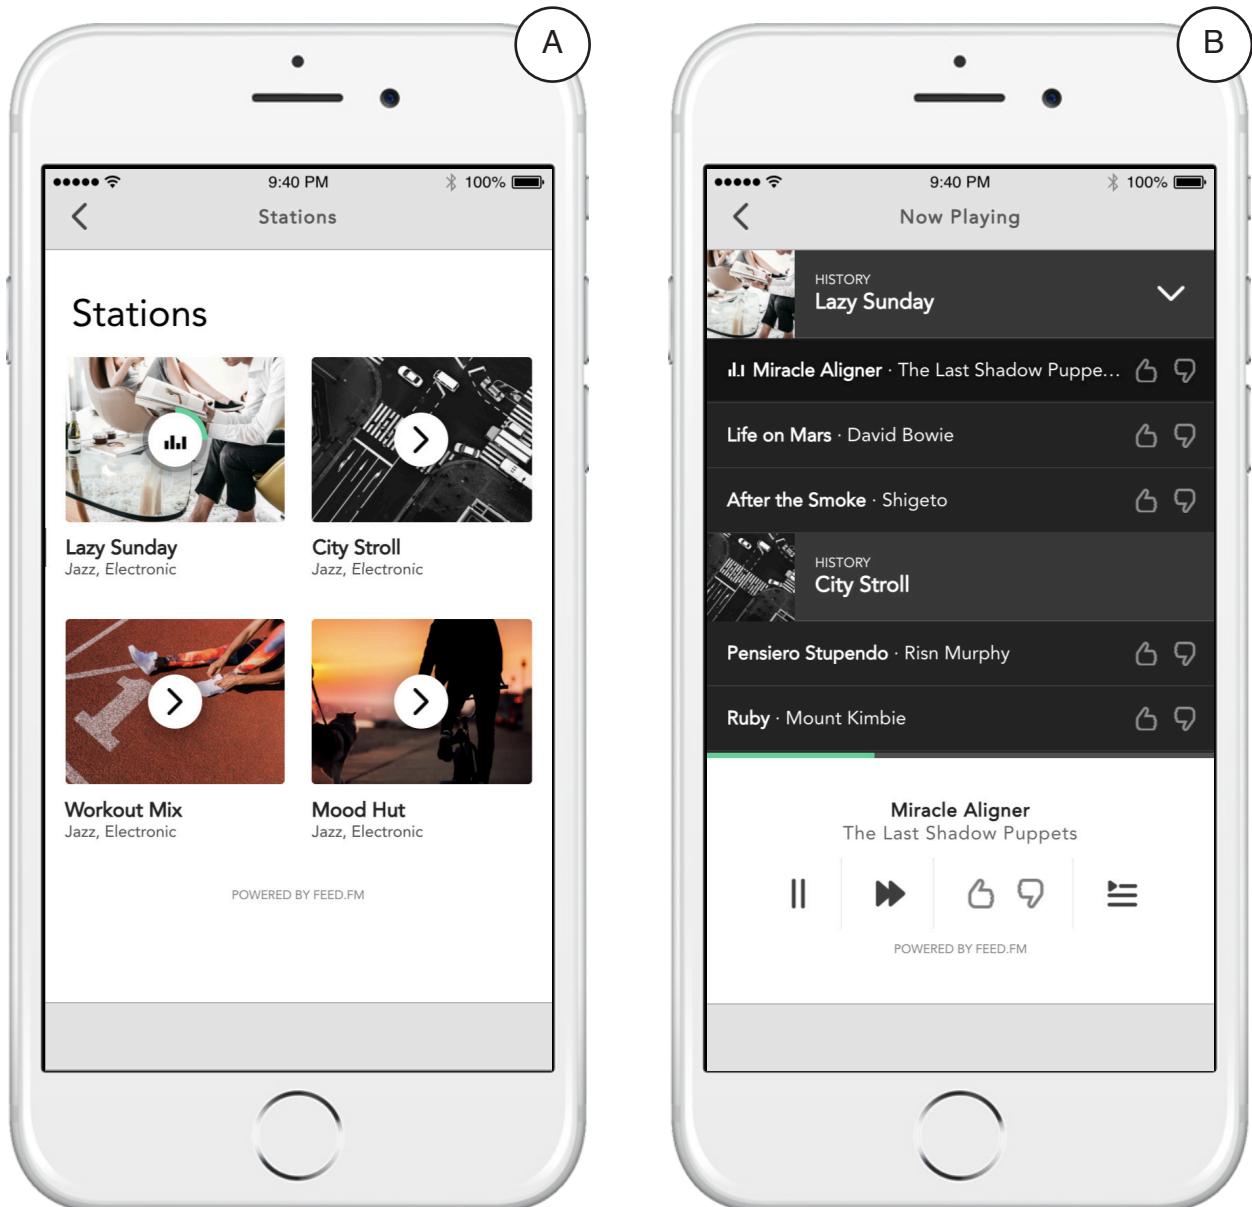

UI States

A Station List

All available stations are listed with titles and descriptions. Each station can be initiated by clicking the Play CTA. If a station is currently playing, the CTA becomes an equalizer with a radial song progress bar to indicate its active status.

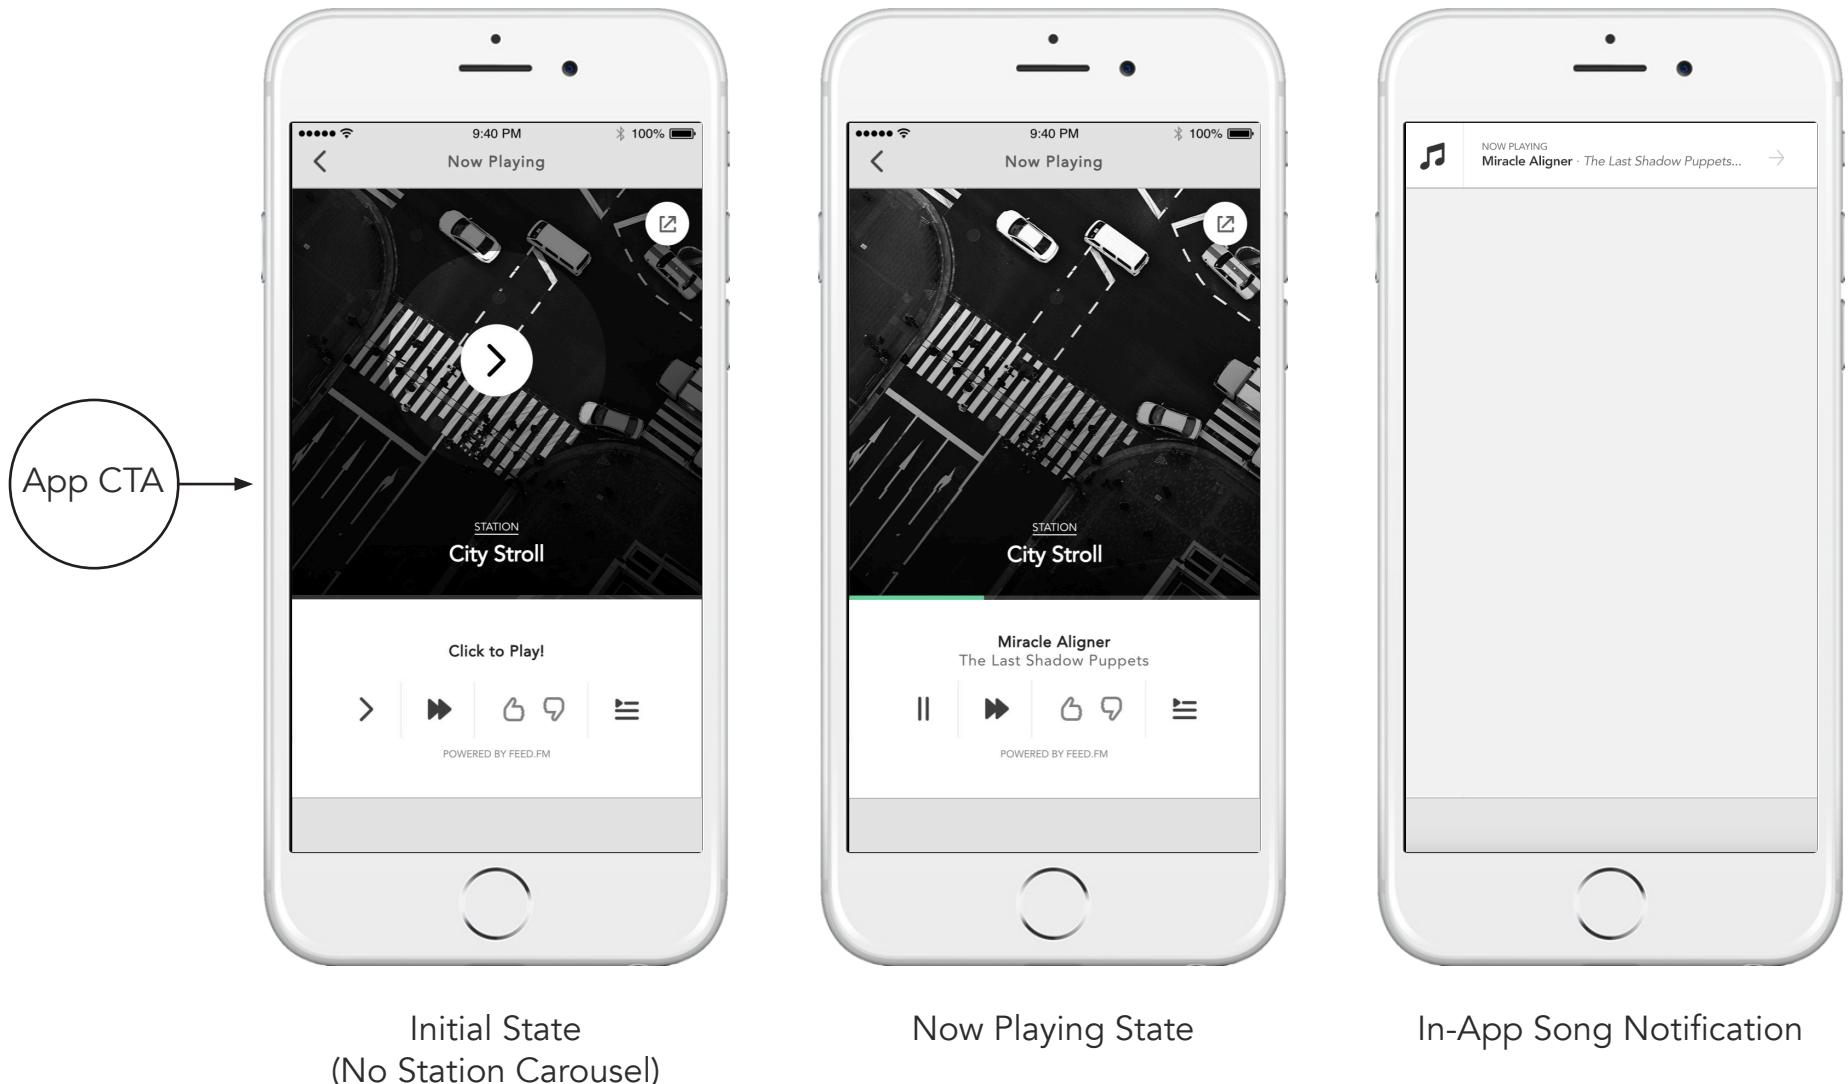

B Song History

The song history pane shows all songs that have been played, grouped by its corresponding station. The user can like/dislike any of the listed songs. The currently playing song is also included with an equalizer icon. The history is only accessible after the first song has been initiated.

In-App Song Notification

01 Demo

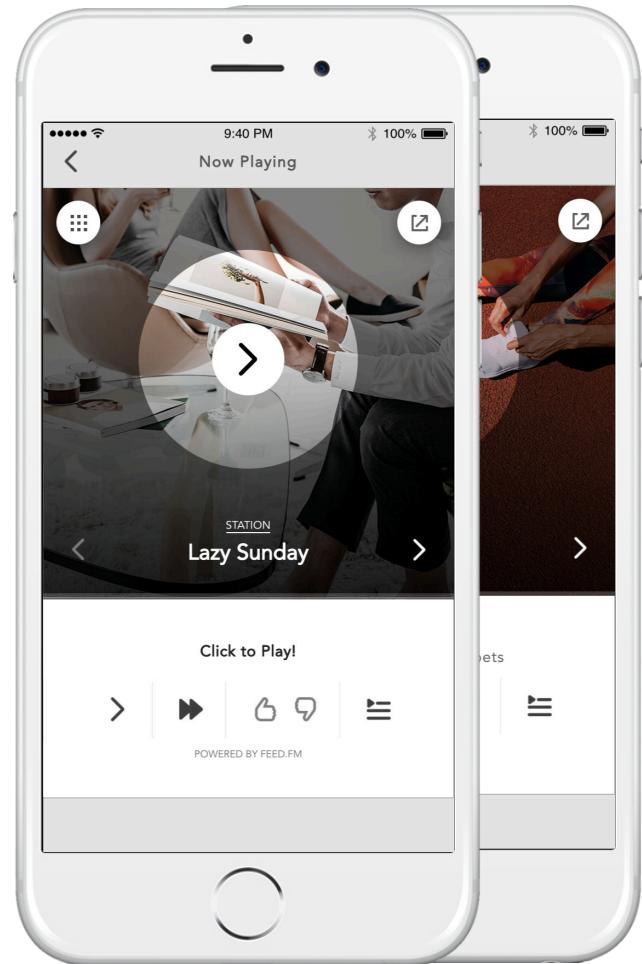

Multi-Station UI Sequence

App CTA can be directed first to the station list

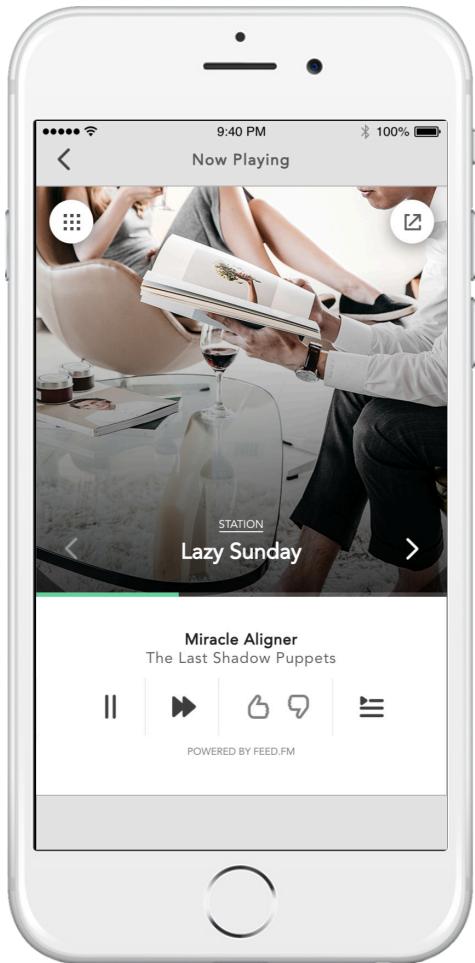

Or, the App CTA can be directed to the player with the ability to swipe through stations

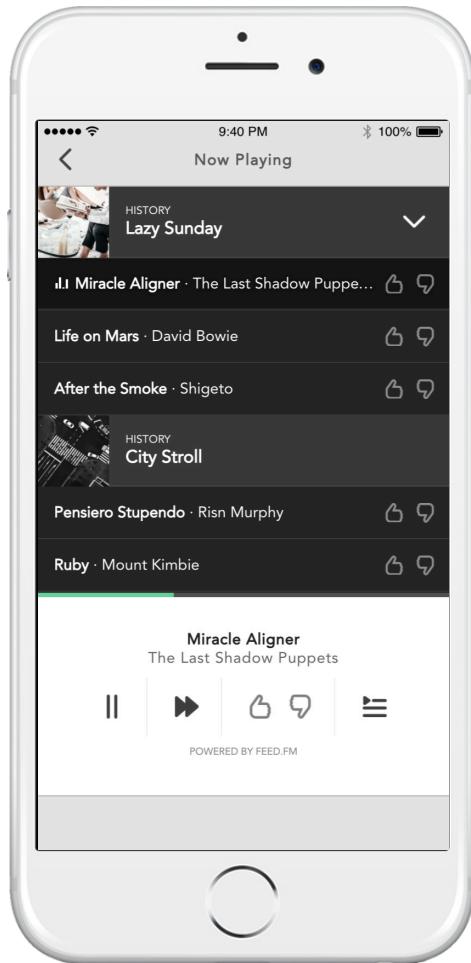

01 Demo

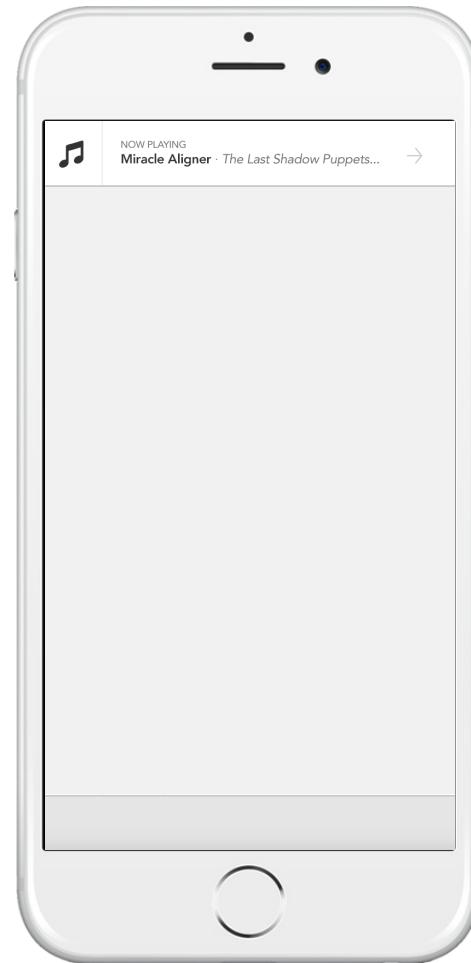

Multi-Station UI Sequence

Station Carousel
(Song Controls are fixed)

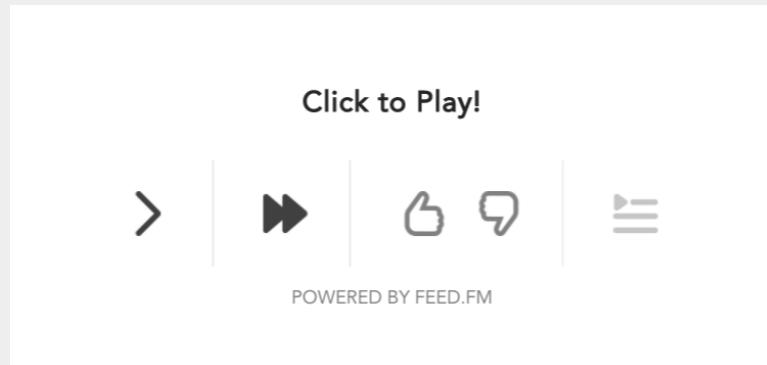

Song History

In-App Song Notification

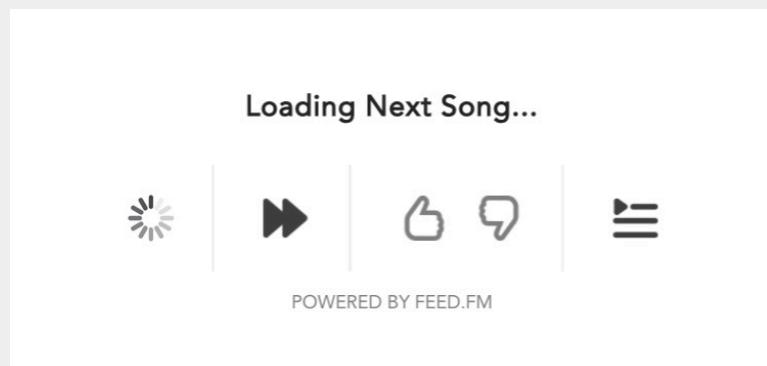

02 Playback States

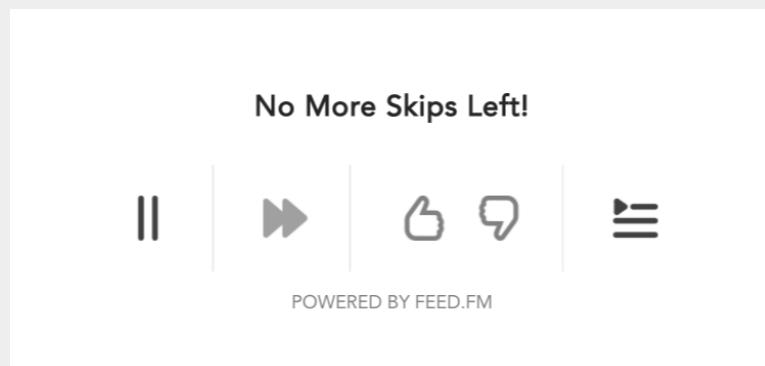

The station has not been initiated yet. The user can click the station art or play button to play. If no song has ever been played, the history icon is inactive.

The station is playing a song and displaying the song meta data. All controls are active.

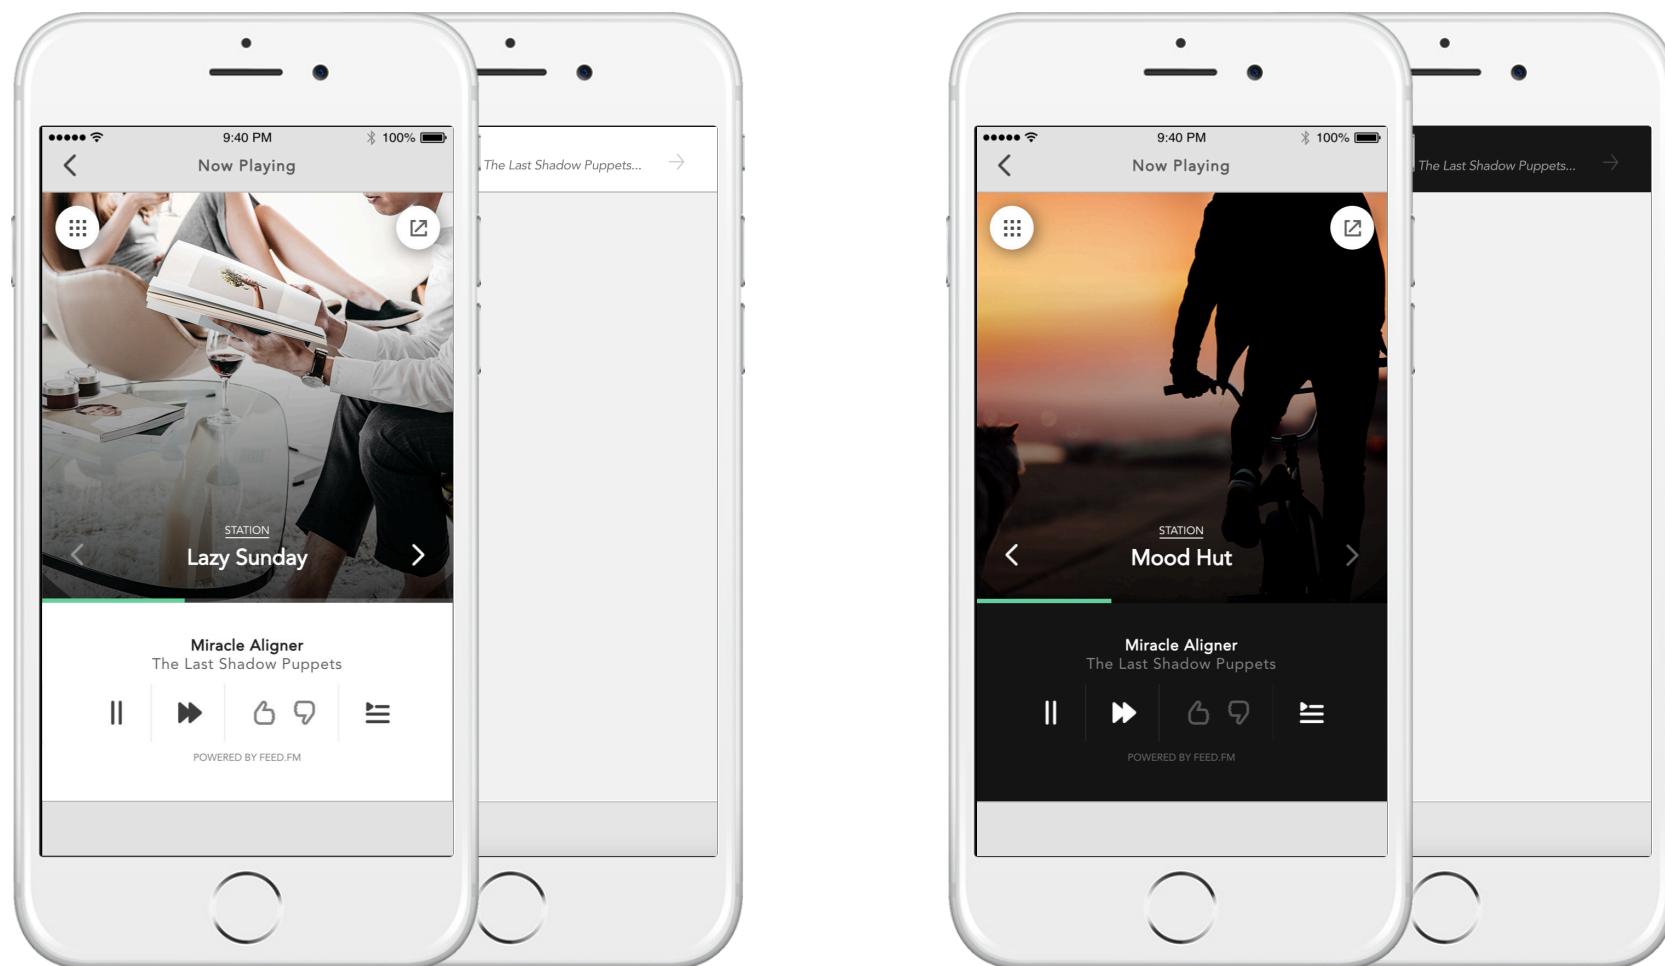

The player is loading the next song but is delayed. An animated loading icon signals what is happening to the user.

The user has tried to skip the song, but there are no skips left. The current song fades for a couple moments to display the message "No More Skips". The skip icon inactive.

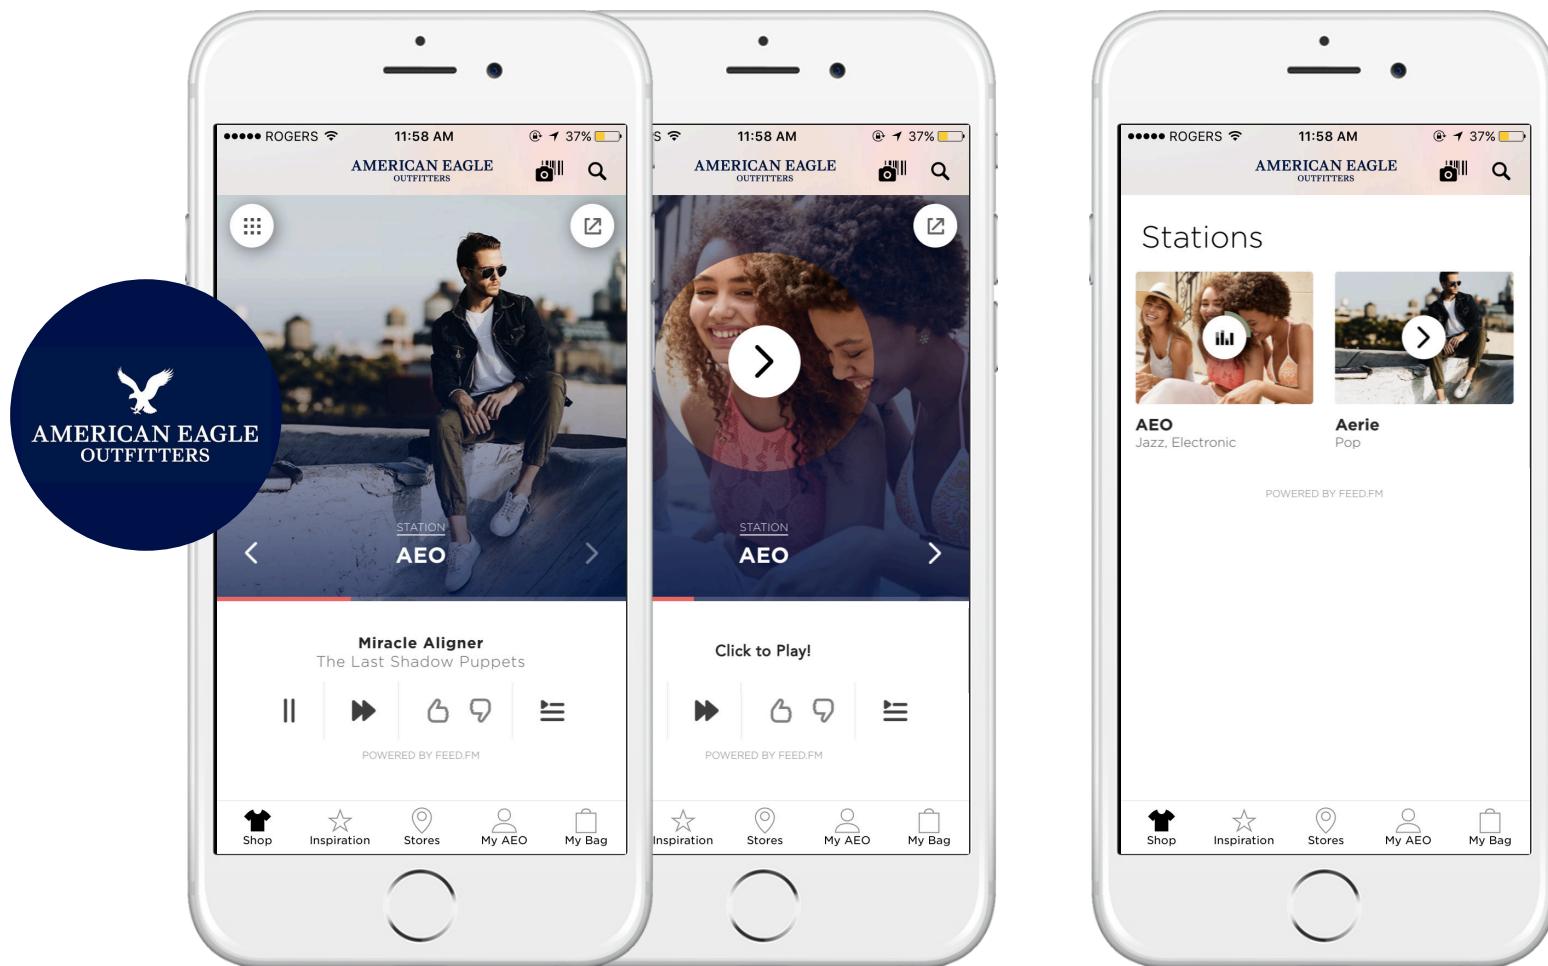

03 Customization

Player Themes

03 Customization

Branded Example

03 Customization Stations

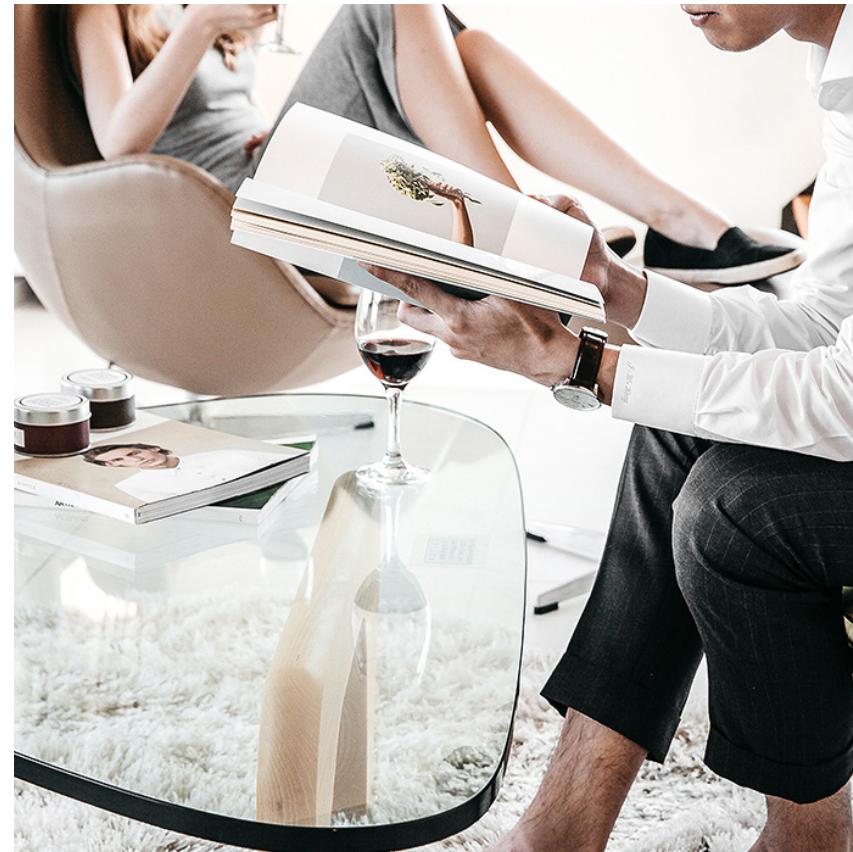

General Requirements

Each station should have a name, short description, and representative image

Station Image Specs

Images can be supplied in any aspect ratio, but will be cropped to a square in some instances. The station art will be displayed either square or portrait orientation for the Station Carousel depending on the device. The supplied image should be at least

2000 x 2000px

03 Customization

Controls

The icon set shown at right is used as the default, but the set can be customized to best suit the app's branding

Icon Image Specs

Each icon should be supplied as either a vector file, or transparent .png file.

icons should be 100x100px

03 Customization

Typography

The Avenir font family is used by default however it can be customized to suit the app's branding.

Font Specs

The font files should be supplied as .otf or .ttf, or selected from the google font library.

Both a Heavy/Bold and Book weights should be included

Two font files can be supplied if song titles and subtext fonts are to be different.

Avenir Book
